

MANAGEMENT'S DISCUSSION AND ANALYSIS

FOR THE SECOND QUARTER ENDED JUNE 30, 2024 AND 2023 (Expressed in US dollars)

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

INTRODUCTION

The following Management's Discussion & Analysis ("MD&A") dated August 28, 2024 is a review of the business activities and overview of financial position for Cerrado Gold Inc. ("Cerrado" or the "Company") for the years ended December 31, 2023 and 2022. The MD&A should be read in conjunction with the Consolidated Financial Statements (the "Cerrado Financial Statements") for the years ended December 31, 2023 and 2022, which were prepared in accordance with IFRS Accounting Standards, as issued by the International accounting Standards Board ("IASB).

This MD&A also reports on items deemed significant that occurred between June 30, 2024 and the date on which the MD&A is approved by the Company's Board of Directors, which is August 28, 2024, inclusively.

The information provided in this MD&A and the unaudited condensed consolidated interim financial statements are the responsibility of management. In the preparation of these statements, estimates are sometimes necessary to make a determination of future values for certain assets or liabilities. Management believes such estimates have been based on careful judgments and have been properly reflected in the unaudited financial statements.

Unless otherwise indicated, all reference to "dollar" or the use of the symbol "\$" are to the United States dollar in this Management Discussion and Analysis.

FORWARD-LOOKING STATEMENT AND USE OF ESTIMATES

This MD&A contains "forward-looking statements" and "forward-looking information" (collectively, "forward-looking information") within the meaning of applicable Canadian securities legislation. All information contained in this news release, other than statements of current and historical fact, is forward-looking information. Often, but not always, forward-looking information can be identified by the use of words such as "plans", "expects", "budget", "guidance", "scheduled", "estimates", "forecasts", "strategy", "target", "intends", "objective", "goal", "understands", "anticipates" and "believes" (and variations of these or similar words) and statements that certain actions, events or results "may", "could", "would", "should", "might" "occur" or "be achieved" or "will be taken" (and variations of these or similar expressions). Forward-looking information is also identifiable in statements of currently occurring matters which may continue in the future, such as "providing the Company with", "is currently", "allows/allowing for", "will advance" or "continues to" or other statements that may be stated in the present tense with future implications. All of the forward-looking information in this MD&A is qualified by this cautionary note. Detailed information regarding risks and uncertainties is provided in the Risk and Uncertainties section of the MD&A.

In preparing consolidated financial statements in accordance with IFRS, management must exercise judgment when applying accounting policies and use assumptions and estimates that affect the amounts of the assets, liabilities, and expenses reported in the consolidated financial statements.

Because the use of assumptions and estimates is inherent to the financial reporting process, the actual results of items subject to assumptions and estimates could differ from original assumptions and estimates.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

COMPANY OVERVIEW & BACKGROUND

Cerrado is a public gold mining and exploration company with assets in Argentina, Brazil and Canada. Cerrado began trading on the TSX Venture Exchange on February 25, 2021 under the symbol "CERT".

In Argentina, Cerrado is focused on its producing Minera Don Nicolás gold mine ("MDN") located in the mineral rich Deseado Massif in the province of Santa Cruz, Argentina. MDN has been in production since 2017. The gold deposits at MDN are classified as epithermal gold vein style deposits typical of the region which is host to numerous large-scale gold operations.

In Brazil, Cerrado currently holds the advanced stage development asset Monte Do Carmo, located in the state of Tocantins. Work completed in 2023 including infill drilling and metallurgy, was incorporated into the NI 43-101 compliant Feasibility Study prepared by DRA Global Limited ("DRA") disclosed in November 2023 and updated at filing in December. The study, for its Monte do Carmo deposit outlined a low-cost open pit and underground operation producing 95,212 Ounces of Gold per annum over 9 years. The Project has also demonstrated robust and significant economics with an after-tax NPV_{8%} of \$390 million and an IRR of 34% using a gold price of \$1,750/oz.

On March 5th,2024 the Company announced that it had entered into an option agreement with Amarillo Mineração do Brasil Ltda. ("Amarillo") a wholly-owned subsidiary of Hochschild Mining PLC ("Hochschild"), whereby Cerrado has granted to Amarillo the option ("Option") to purchase a 100% interest in the Company's Monte Do Carmo project ("MDC Project") located in the State of Tocantins, Brazil (the "Proposed Transaction"), for total consideration of US\$60 million (approximately C\$80 million) (the "Purchase Price"), subject to the fulfilment of certain conditions.

The Purchase Price would be payable in the following stages:

US\$15 million Option payment, initially advanced in staged payments by way of a 10% interest-bearing secured loan (the "Signing Loan"), has been paid to Cerrado following the mailing by Cerrado to its shareholders of a notice of meeting and management information circular in connection with a meeting to approve the Proposed Transaction to be held by June 30, 2024 (the "Cerrado Shareholder Approval").. The aggregate of US\$45 million, is payable in four installments over the next three years, approximately, with \$30 million payable on closing of the Option expected by March 2025 or sooner, \$10 million within 14 days of the second anniversary of when Cerrado shareholders approved the Proposed Transaction and \$5 million within 14 days of the earlier of: (i) the commencement of commercial production from the Project; and (ii) March 31, 2027.

In Canada, since the acquisition of Voyager Metals effective May 31, 2023, the Company has continued work developing the Mont Sorcier High grade Iron project in Roy Township, Quebec, 18 km east of the Town of Chibougamau. The Company most published an NI 43-101 compliant Preliminary Economic Assessment on the project in July 2022 and has undertaken additional metallurgical tests to confirm the ability to produce high purity 67% grade iron concentrate, up from an original expectation of 65%, which is highly desired by the growing green steel industry and for DRI steel production. The company is now working to prepare to complete a feasibility study and the related Environmental and Social Impact Assessment to bring the project towards a development decision over the next few years.

Updated Mineral Resource Estimate and Preliminary Economic Assessment at Minera Don Nicolas

Subsequent to quarter end, on August 6th, 2024 the Company released the results of a NI 43-101 Preliminary Economic Assessment ("PEA") and an updated Mineral Resource Estimate ("MRE") for its Minera Don Nicolas mine located in Santa Cruz Province, Argentina. The work was completed by GeoEstima SpA. The final report is to be completed and available on SEDAR+ by 20th September 2024. The results show a robust cash generating operation producing approximately 56,000 GEO per annum over an initial five year mine life

The key highlights are presented below

•

- After Tax NPV5% of US\$111 Million at US\$2,100/oz Au price
 - After Tax NPV5% of US\$153 Million at Spot prices¹
 - Average annual production targeted at approx. 56,000 Gold Equivalent Ounces ("GEO")²
- Life of Mine Average annual EBITDA of US\$49 Million and FCF of US\$25 Million
 - LOM average EBITDA of US\$64 Million and FCF of US\$29 Million at Spot prices¹
- Mine life of 5 years, from April 2024 based on existing Resources

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

- Average Cash Costs of US\$863/oz; Avg AISC US\$1,144/oz
- No Material Upfront Capital Expenditures required
- Updated Mineral Resource Estimate contains 490,000ozs of Measured and Indicated Resources and 121,150 ozs of Inferred Resources with potential upside from continued drilling & resource expansion

Notes

1. Spot prices; Au: US\$2,400/oz and Ag:US\$29/oz

2. GEO calculated by multiplying recovered silver ounces by (25/2100)

MDN is an established gold mining operation located in the province of Santa Cruz, Argentina. MDN is located in the prolific Deseado Masiff with exploration rights over 330K Ha. The operations commenced in 2019 as an open pit CIL operation with mineralized material produced from deposits in the Paloma and Martinetas regions which are mostly depleted of ready to mine resources. In 2023, MDN added a heap leach operation to process the mineralized material from Calandrias Sur open pit. The PEA is focused on the development and mining of the high grade Calandrias Norte open pit to be processed through the existing 1,000 tpd CIL plant until late 2024 and the ongoing operations and expansion of the Calandrias Sur heap leach operations until at least 2028. In addition, the PEA has envisaged the development of an initial small scale underground mining operation upon which future underground exploration is expected to extend the mine life; and the processing of low grade mined material in the Martinetas area from several stockpiles.

Mineral Resources

The PEA is based on the updated Mineral Resource Estimate (MRE), prepared in accordance with National Instrument 43-101 – *Standards of Disclosure for Mineral Projects*, completed by GeoEstima, with an effective date of April 1st, 2024, as presented below. It should be noted that Mineral Resources, which are not Mineral Reserves do not have demonstrated economic viability. This update reflects not only those resources assumed to be mined in the PEA but also other defined resources within the greater MDN property. Estimation of depleted satellite Mineral Resources was validated by Cerrado's Qualified Persons ("QPs"), as defined in NI 43-10, keeping estimation parameters from the previous technical report (SRK 2020), and using updated drilling data bases and constraining pit shells.

The following table shows our estimates of Mineral Resources prepared with an effective date of April 01, 2024 (except as indicated below).

			Grade	Values	Metal	Content

Notes:

¹ Included in economic evaluation

² Not included in economic evaluation

³ Satellites include Armadillo, Baritina, Baritina NE, Cerro Oro, Coyote, Choique, Mara, and Trofeu

⁴ Include the stocks from: Armadillo, Cerro Oro, Coyote, Choique, and Mara.

Notes to Mineral Resources Table

Mineral Resource estimates were prepared by the May 10, 2014 edition of the Canadian Institute of Mining, Metallurgy and Petroleum (or CIM) Definition Standards for Mineral Resources and Mineral Reserves ("2014 CIM Definition Standards") and disclosed in accordance with National Instrument 43-101 – Standards of Disclosure for Minerals Project ("NI 43-101").

The Qualified Persons for the estimation of Mineral Resources are Calandrias Sur, Calandrias Norte, Zorro, Paloma Trend and Stockpiles – Orlando Rojas, P.Geo, Member AIG, a GeoEstima SpA employee and Armadillo, Baritina, Baritina NE, Cerro Oro, Coyote, Choique, Mara and Trofeu – Sergio Gelcich, P.Geo, MAusIMM (CP) Geo, Vice President, Exploration, a Cerrado Gold employee.

Mineral Resources have an effective date as of: (a) April 1st, 2024, for Calandrias Sur, Calandrias Norte, Zorro, Paloma Trend, Armadillo, Baritina, Baritina NE, Cerro Oro, Coyote, Choique, and Trofeu; (b) August 31st, 2020, for Mara satellite.

Mineral Resources estimated using an average long-term metal price of US\$2,100.0/oz of Au and US\$25.0/oz of Ag. For Mara satellite, an average long-term metal price of US\$1,550.0/oz of Au is considered, assuming a mining cost of US\$2.65/t, plant cost of US\$32.0/t, and selling costs of US\$127.0/t.

Recoveries depend on the type of host mineralization and the extraction method being utilized for the minerals. For the carbon-inleach (CIL) process, Au recovery is based on historical metallurgical recovery, which is 90% for Au and 61% for silver. For the Heap Leach process (HL), Au recovery is based on metallurgical test works and depends on the zone. Au recovery is 70% in the Oxide zone, 60% in the Transitional zone, and 40% in the Primary zone. The silver recovery is 30% in all zones.

Mineral Resources in open pit are reported within pit shell constrain and above a cut-off grade: Calandrias Sur has a variable cut-off -0.27 g/t Au for the Oxided zone, 0.31 g/t Au for the Transition zone and 0.46 g/t Au for Primary zone; Calandrias Norte -1.46 g/t Au; Zorro, Armadillo, Baritina, Baritina NE, Cerro Oro, Coyote, Choique, Mara and Trofeu -0.3 g/t Au. In Paloma Trend, Mineral Resources are reported within a cut-off grade of 1.95 g/t for underground mining shapes. A minimum mining width of 1.5m was used for resource shapes.

The estimated costs are: Calandrias Sur – plant cost of US\$11.08/t; Calandrias Norte – plant cost of US\$78.33/t; Zorro – plant cost varying from US\$ 13.35 for HL process and US\$ 68.20 for CIL process; Depleted Satellite – plant cost of US\$40.0/t. The selling costs of US\$242.90/t and mining costs of US\$3.50/t was assumed for all open pit costs of US\$3.50/t was assumed for all open pit costs are US\$40.0/t, plant costs are US\$65.0/t and selling costs are US\$242.9/t. The exchange rate considered is ARG 917.25 / 1 USD.

Density was assigned and interpolated based on specific gravity values by domain.

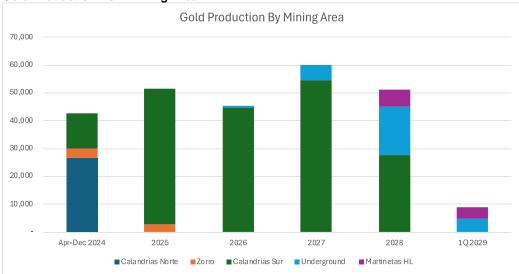

Numbers may not be added due to rounding.

The PEA is primarily designed to exploit the Calandrias Norte high grade deposit and the Calandrias Sur low grade, heap leach, deposit. In addition, a modest underground mine based solely on currently known resources in the Paloma Trend and the smaller Zorro open pit near Martinetas are planned to add additional material for the CIL processing plant. The mine design is based on using standard open pit mining techniques of drill, blast and haul using a fleet of its own and rented mining equipment mining fleet to reduce capital needs. Mineralized material from Calandrias Norte is trucked to the CIL plant near the historical Martinetas mining operations for proceeding while material from the Calandrias Sur pit is crushed and placed on the leach pad in close proximity to the mining operations. The gold loaded

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

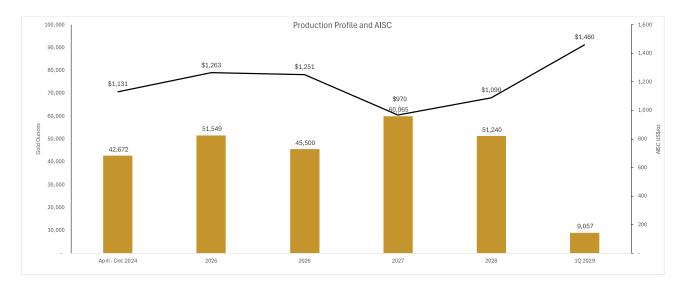

carbon from the heap leach operations will be transported to the gold recovery circuit at the Martinetas site. Once processing of the Calandrias Norte and any additional high-grade material is completed, the CIL plant is to be placed on Care and Maintenance until mineralized material from the proposed underground mine becomes available in 2026 after underground development has been completed. Once this material is processed the CIL plant will once again be placed on Care and Maintenance until sufficient new sources of mineralized material have been upgraded to support ongoing mining operations which are expected from future exploration activities. This potential is currently excluded from the PEA mine plan.

Gold Production from Mining Area

Gold Production Profile and AISC cost profile

The chart below highlights the expected production and cash cost/ AISC profile at MDN as per the PEA. Production in expected to average approximately 56.000 GEO over the five year mine life with LOM AISC will average US\$1,144 per year. The PEA outlines gold production from April onwards and excludes the production of 10,982 ozs of gold in Q1/24. A total of 15,938 oz of gold were produced in Q2/24.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

Project Economics

The PEA highlighted robust economic results with an after tax NPV at an 5% discount rate of US\$111 million at a flat gold price of \$2,100/oz. Project economics are based on a potential 5+-year mine life, with immediate positive after-tax cash flow commencing as at 1 April 2024. Total cumulative, after tax free cash flow over the life of mine is estimated at US\$126 million (US\$24 million per annum) at a \$2,100/oz gold price. At a gold price of \$2,400/oz the NPV at an 5% discount rate increases to \$153 million.

Upside Opportunities – Exploration Activities

The PEA only considered known, easily exploitable resources and does not reflect the potential that is anticipated from ongoing exploration programs. In the near term the operations are focused on four initial high value target areas as noted below.

- 1) Underground Expansion in Paloma Region Underground exploration is targeted to grow known resources from future underground exploration activities at Sulfuro and in the Sulfuro Est zones once development starts. New designed underground exploration ramps will allow efficient drilling targeting extensions and parallel structures of the current inventory included in the PEA.
- 2) Goleta The Goleta high grade under cover target is located approximately 7 km from Martinetas. Mineralization on surface is related to mineralized fragments of banded quartz veins (up to 1.g m in diameter) within presumably phreatic breccia. The exploration premise is that these large clasts are proximal to a primary source (high grade quartz vein system) located below the breccia. This concept is similar to the Marianas vein discovery in the Cerro Negro deposit (Newmont) also located in the Cerrado Massif.
- 3) Calandria North The deposit is open to the Southwest following the plunge that controls the high-grade Mineralization. This target represents a potential low capital Underground development, making use of the current infrastructure in the area
- 4) Paula Andrea Extensive exploration carried out last year outlined several areas with the potential of hosting high grade mineralization like the mined out Chulengo and Baritina pits. The area includes phreato-magmatic breccia hosted mineralization and extensional jogs along fertile structures.

Other Targets – In addition to the targets listed above numerous other targets are known on the projects such as the Chispas targets which is located along strike from the recently defined Naty deposit on the neighboring Cerro Moro operation (Pan American Silver). Various lower grade heap leach targets also remain to be more fully defined, notably the depleted resources reported for some of the mined Martinetas pits, which need to be evaluated further for extensions and viability of hybrid CIL and HL processing.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

OUTLOOK

With the closing of the Option purchase agreement related to the sale of the MDC assets, strong gold prices and more stable operating environment as seen Q2 and as outlined in the recent PEA for MDN, Cerrado is now positioned to work to improve its balance sheet going forward. The weakened balance sheet and the resultant sale of MDC was triggered by fiscal policy changes implemented in Argentina following the November 2023 general election, which imposed a significant financial burden to the Minera Don Nicolás ("MDN") operation and generally poor capital market conditions for junior mining companies. The environment has since stabilized to a degree and expectations for a further loosening of the capital controls is anticipated later this year.

Going forward, the company remains focused on securing existing cashflows to generate sufficient cash to enhance its overall financial position. In the near term the focus will be on maintaining production rates in Argentina at around current rates for the next 5 years as outlined in the recent PEA with an average of 56,000 GEO per annum expected with limited new capital required which is to be funded out of cash flows. Exploration programs to continue to grow both high and low grade ore resources and more fully develop the underground potential that is already known at MDN are also planned. The lack of liquidity in 2023 reduced exploration expenditures, limiting available high grade resources ready for near term mining. As outlined in the PEA the current operational plan entails a doubling of the current heap leach capacity to sustain a robust production profile for the next several years. During this period exploration programs are to be targeted to continue to grow the existing high-grade ore resources both through Open pit and Underground targets that are currently being further delineated.

The Company produced 16,255 GEO and sold 15,775 GEO during Q2 2024. Production levels improved over Q1 2024 from a full quarter processing high grade ore from the Calandrias Norte pit. That said it should be noted June results were impacted by heavy snows which reduced overall production to a degree. Production from Calandrias Norte will aim to remain at these levels for at least Q3/24 with additional production delivered from the heap leach operation as it ramps up to full production.

At the Calandrias Sur heap leach project, the crushing plant is now operating as expected, which has resulted in a more consistent feed to the heap leach pad improving overall performance and resulting in ~2,420 GEO produced during the quarter. Production is currently running at ~1,000 GEO per month, expected to reach ~2,000 GEO per month during Q3/24, with further ramp up of the expanded capacity in early Q4/24 now anticipated.

As noted the Company completed an 43-101 Mineral Resource Update and a Preliminary Economic Assessment of the near-term heap leach operations at Calandrias Sur, Calandrias Norte and the development proposals for defined ore in the Martinetas area. MDN is expected to follow the development and production profile outlined in the PEA, subject to defining new high-grade resources.

Going forward into the third quarter of 2024 and beyond Cerrado's MDN operations are now positioned to benefit from the completion of its recent expansionary capital expenditure program to grow production with its new heap leach operations, while sustaining high-grade CIL production until around year end. Results in Q2/24 demonstrate a more normalized operations because of these investments. As a result, the Company anticipates a significant improvement in cash generation, which should be significantly enhanced with an improved fiscal policy and a more normalized foreign exchange regime in Argentina supporting lower operating costs in US dollar terms. While the near-term cash generating profile continues to improve, the Company is also actively working to term out the maturity of its current short term debt profile.

Exploration during the quarter was minimal as the Company remained focused on strengthening the balance sheet. The Company expects to start drilling on the property again in earnest in Q3/24. Exploration work remains ongoing to focus on growing the known resources at MDN beyond those outlined in the recent Mineral Resource Estimate ("MRE"). The focus remains on drilling high grade near surface targets that can readily be brought into the mine plan as well as the continued regional program to better understand the potential of the significant land package at MDN. Additionally, planning for deeper drilling with the potential of extending the high-grade underground resource at MDN has identified the opportunity to develop Paloma as an underground mine.

At the Mont Sorcier high grade iron project operated by Cerrado's wholly owned subsidiary Voyager Metals Inc., work continued to advance the project with several workstreams related to permitting, social license and the overall feasibility study. Metallurgical test work also resulted in an optimized flow sheet being designed and the demonstrating the ability to deliver a 67% high grade iron concentrate. Work programs at Mont Sorcier are currently on a care and maintenance approach pending additional funding being available. The company remains in discussions with various parties to

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

support accelerating project development, however, at this time the timeline to deliver the Feasibility study is under review.

2024 HIGHLIGHTS

Operational Performance

Minera Don Nicolas

MDN is a remote mining operation with a self-sustaining camp facility. The MDN operation is running steadily, and lessons learned in ore control and short term mine planning continue to deliver the required gold grades. At the new Calandrias heap leach project mining and ore placement on the heap leach pad commenced during the quarter. Completion of the Crusher installation has allowed for a steady ramp up of ore delivered to the leach pad to support rising monthly gold production rates over the quarter and the operation is expected to reach production rates close to 2,000 GEO per month during Q3/24 and to expand to 4,000-4,5000 GEO per month by year end.

At the Calandrias Norte deposit, waste stripping was completed during the quarter, and high-grade ore is being fed to the CIL plant as of March 2024 and will be the primary source of high grade feed to the mill for 2024.

Las Calandrias Heap Leach Project

At the new Calandrias heap leach project, work continued as the operation entered the ramp-up phase during the quarter. Finalization of the crushing plant has now been completed, which has resulted in more consistent feed to the pad and improved overall performance. Production is now set to achieve nameplate production rates during Q3/24f. Calandrias Sur is planned to be the primary source of gold production during 2025 and 2026 as other areas are prepared for future operation

MDN gold production is expected to stabilize around 50,000 ounces per annum with the mine focusing on developing new reserves and the addition of the Calandrias Heap-leach and future Martinetas heap leach facilities. As previously announced the company is targeting 2024 production in the range of 50,000 -60,000 GEO for 2024.

Six months ended June 30, 2024

The Company produced 27,459 gold equivalent ounces ("GEO") during the six months ended June 30, 2024, as compared to 26,404 GEO for the six months ended June 30, 2023. Production is higher in the six months ended June 30, 2024, due to 8% higher gold head grade and 2% higher recovery, offset by 18% lower throughput.

The Company generated revenue of \$55.1 million for the six months ended June 30, 2024, from the sale of 25,603 ounces of gold and 42,258 ounces of silver at an average realized price per gold ounce sold of \$2,109. For the six months ended June 30, 2023, the Company generated revenue of \$48.7 million from the sale of 26,912 ounces of gold and 24,591 ounces of silver. Revenue is higher than the six months ended June 30, 2023, due to higher average realized gold price.

Cost of sales for the six months ended June 30, 2024, were \$46.7 million as compared to \$37.4 million for the six months ended June 30, 2023. The Company incurred \$11.6 million higher production costs for the six months ended June 30, 2024 due to higher costs of operational contractors and materials, and higher labour costs in 2024 as compared to 2023.

Total cash costs (including royalties) per ounce sold was \$1,520 per ounce in the six months ended June 30, 2024, as compared to \$1,206 per ounce for the six months ended June 30, 2023 a \$313 per ounce or 26% increase (refer to reconciliation of Non-IFRS performance metrics). The increase is a result of higher production costs incurred in 2024 as compared to 2023.

Net loss for the six months ended June 30, 2024, was \$6.2 million as compared to a loss of \$7.9 million for the six months ended June 30, 2023. The decrease in net loss is primarily a result of an increase in metal sales, \$0.8 million decrease in general and administrative expenses and \$0.6 million decrease in transaction costs, offset by higher production costs and remeasurement of MDN stream obligation of \$2.1 million.

The Company incurred general and administrative expenses of \$4.9 million for the six months ended June 30, 2024, as compared to \$5.7 million of general and administrative expenses incurred during the six months ended June 30, 2023. The decrease was primarily as result of a decrease in salaries and wages of \$1.3 million for the six months ended June 30, 2024.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

Other expenses incurred of \$8.4 million during six months ended June 30, 2024, includes finance expense of \$4.0 million, loss on fair value remeasurement of MDN stream obligation of \$2.1 million and loss on fair value remeasurement of MDC secured note and stream obligation of \$2.2 million.

Second quarter ended June 30, 2024

The Company produced 16,255 GEO during the second quarter ended June 30, 2024, as compared to 12,453 GEO for the second quarter ended June 30, 2023. Production is higher in the three months ended June 30, 2024, due to 46% higher gold head grade and 9% higher recovery, offset by 29% lower throughput.

The Company generated revenue of \$34.7 million for the second quarter ended June 30, 2024, from the sale of 15,484 ounces of gold and 23,509 ounces of silver at an average realized price per gold ounce sold of \$2,199. For the second quarter ended June 30, 2023, the Company generated revenue of \$21.2 million from the sale of 10.907 ounces of gold and 9,242 ounces of silver at an average realized price per gold ounce sold of \$1,919. Revenue and sales of gold for the current period are higher than the quarter ended June 30, 2023, due to higher ounces sold and higher average realized gold price.

Cost of sales for the second quarter ended June 30, 2024, were \$23.1 million as compared to \$16.7 million for the quarter ended June 30, 2023. The Company incurred \$6.9 million higher production costs for the second quarter ended June 30, 2024 due primarily to higher labour costs.

Total cash costs (including royalties) per ounce sold were \$1,178 per ounce in the second quarter ended June 30, 2024, as compared to \$1,306 per ounce for the second quarter ended June 30, 2023 a \$128 per ounce decrease (refer to reconciliation of Non-IFRS performance metrics). The decrease is a result of higher ounces sold and lower royalty costs incurred in 2024 as compared to 2023.

Net income for the second quarter ended June 30, 2024, was \$1.0 million as compared to a \$0.4 million net loss for the second quarter ended June 30 2023. The decrease in net loss is primarily a result of higher revenues, offset by higher other expenses and income and mining taxes.

The Company incurred general and administrative expenses of \$2.5 million for the second quarter ended June 30, 2024, as compared to \$2.3 million of general and administrative expenses incurred during the second quarter ended June 30, 2023. For the three months ended June 30, 2024 there was an increase in office expense of \$0.4 million offset by a decrease in professional fees of \$0.3 million.

Other expense of \$7.3 million during the second quarter ended June 30, 2024, includes finance expense of \$2.6 million, foreign exchange loss of \$5.0 million, loss on fair value remeasurement of MDN stream obligation of \$0.2 million and loss on fair value remeasurement of MDC secured note and stream obligation of \$0.4 million.

CORPORATE DEVELOPMENTS

Option and Loan agreement

In March 2024, the Company announced that it has entered into an option agreement with Amarillo a wholly-owned subsidiary of Hochschild, whereby the Company has granted to Amarillo the option to purchase a 100% interest in the MDC Project for total consideration of \$60 million subject to the fulfilment of certain conditions.

In June 2024 the Company's shareholders approved the proposed arm's length sale by the Company to Amarillo of all the issued and outstanding shares of Serra Alta.

In accordance with the provisions of a Loan Agreement among the Company and Amarillo dated March 4, 2024 (the "Loan Agreement"), immediately following the shareholders' approval of the Transaction, all of the credit obligations owing by the Company and two of its subsidiaries, Serra Alta Mineração Ltda and Serra Alta Participações Imobiliárias S.A., to the Lender under the Loan Agreement were deemed to have been repaid in full and therefore the Loan Agreement terminated. In accordance with the Loan Agreement, the amount outstanding that has been deemed to have been repaid shall be applied as partial consideration payable by the Lender to complete the Transaction.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

The purchase price will be payable in the following stages:

- 1. \$15.0 million, initially advanced by way of a 10% interest-bearing secured loan of which US\$7 million was advanced on March 4, 2024, \$1.0 was advanced on May 6, 2024, and the balance of \$7.0 million was advanced June 14, 2024.
- 2. An aggregate of \$45.0 million, payable in four installments over the next three years, approximately, as further described below.
- \$10.0 million (the "Second Payment") in cash, payable within 5 days of the date on which Amarillo gives written notice of its exercise of the Option to the Company, which option expires on March 19, 2025.
- \$20.0 million (the "Third Payment"), and, together with the Signing Loan and the Second Payment, the "Consideration") in cash payable upon either: (i) if necessary, the approval of the Proposed Transaction by Hochschild shareholders, which is to occur no later than June 30, 2025; or (ii) if Hochschild shareholder approval is not required, by no later than March 30, 2025.

In addition, Amarillo will make the following additional payments following the closing of the Proposed Transaction:

- \$10.0 million in cash payable within 14 days of the second anniversary of the date of the Company Shareholder Approval (the "Second Anniversary Payment"); and
- \$5.0 million in cash payable within 14 days of the earlier of: (i) the commencement of commercial production from the MDC Project; and (ii) March 31, 2027 (the "Production Payment").

During the Option Period Amarillo will take operational control of the MDC Project and has committed to spending a minimum of \$5 million in qualifying expenditures.

Sprott Financing

On March 2, 2023 the Company entered into an amended and restated metals purchase and sale agreement with Sprott to include the concessions acquired by the Company in its acquisition of Minera Mariana Argentina SA in 2020, broadening the stream area including, most notably, production from the Las Calandrias heap leach project. The agreement provides Cerrado with an additional \$10.0 million in funding in the form of an additional deposit against future production. In this amended and restated streaming agreement with Sprott the step-down trigger has also been increased from 21,250 gold equivalent ounces to 29,500 gold equivalent ounces, all other material terms remain the same as the original agreement.

Acquisition of Voyager Metals

In March 2023 Cerrado announced the acquisition of Voyager Metals and its principal asset the Mont Sorcier magnetite iron project. Mont Sorcier is a well advanced, large, long-life and economically robust Project in a tier one mining jurisdiction. In September 2022, Voyager completed a Preliminary Economic Assessment (the "PEA") on Mont Sorcier, which outlined a project with an after-tax NPV of US\$1.6 billion and IRR of 43% producing 5 million tonnes per annum of iron concentrates grading 65% iron over a mine life of 21 years with annual free cash flow of US\$235 million. The project is currently advancing towards completion of a bankable Feasibility Study expected by the end of 2023. Recent metallurgical test results have demonstrated the ability to produce high purity 67% iron concentrates. Under the terms of the Arrangement, Voyager shareholders received one common share of Cerrado for every six

common shares of Voyager (the "Exchange Ratio"). The Exchange Ratio implied a consideration of CDN \$0.1523 per Voyager Share based on the 20 day volume weighted average price ("VWAP") of the closing price of Cerrado common shares on the TSX Venture Exchange ("TSXV") on March 3, 2023, representing a 16.8% premium to 20-day VWAP of Voyager on the TSXV on March 3, 2023.

On May 25, 2023 the shareholders and option holders of Voyager approved the completion of the Arrangement. The Arrangement became effective on May 31, 2023 after receiving all approvals necessary and the Company acquired all of the issued and outstanding shares of Voyager that it did not already own.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

ARGENTINA OPERATIONS

EXPLORATION

Minera Don Nicolas

No exploration drilling has been conducted in 2024 to date. Field activities this quarter focused on mapping, and geophysical and geochemical surveys in preparation for a more detailed drill campaign during Q3 of this year.

The mains focus in Q2 was the completion of the NI 43-101 Resource Update and a Preliminary Economic Assessment for MDN which results were disclosed on August 6, 2024.

In Q2 2024 two large LAG geochemical grids were completed south of Calandrias in the Escondido and Sidra Pool Areas.

A systematic review of prospective lineaments outlined by Goldspot in 2022 was completed in Q2 including through field reconnaissance of approximately 50 areas. These lineaments tend to be parallel to the known Sulfuro vein and respond mainly to geophysical signatures, representing potential buried targets. New target areas have been identified from this exercise including Antena West and Verde Northwest. The company will carry out some IP/Res lines over the Verde main structure in Q3 to test deeper zones of the outcropping structures.

Brownfield exploration efforts in this quarter focused on the Martinetas, Paloma Block and Goleta areas

In the latter, Goleta, Cerrado has identified a promising new target, that has been identified approximately 7 kilometers from the plant. In 2023, a small pit was mined, and mineralization was found to be related to mineralized fragments contained in a phreatic breccia. Cerrado believes that these fragments come from a buried high Au banded vein. This geological setting is similar to the Mariana-San Marcos Deposit in Cerro Negro (Newmont), where a primary quartz vein containing around 500koz is buried under a breccia that includes a few fragments of the veins as clasts. Cerrado completed one hole during 2023, which intersected a quartz stockwork in the underlying felsic ignimbrites that are believed to be the vein's host rock. To further our understanding, the company completed in Q1/24 a ground magnetic survey aimed at delineating deeper structures that could control the predicted deep-sitting vein. 2D magnetic modeling resolved the contact between stratified units in the upper breccia body. An IP/RES equipment was mobilized to site in early August and data acquisition started on the 12th of August. The aim of the survey is to detect minor resistivity contrast that can reflect the location of the primary vein below the outcropping breccias. A 3,000 m drilling plan will commenced in August to better define this opportunity.

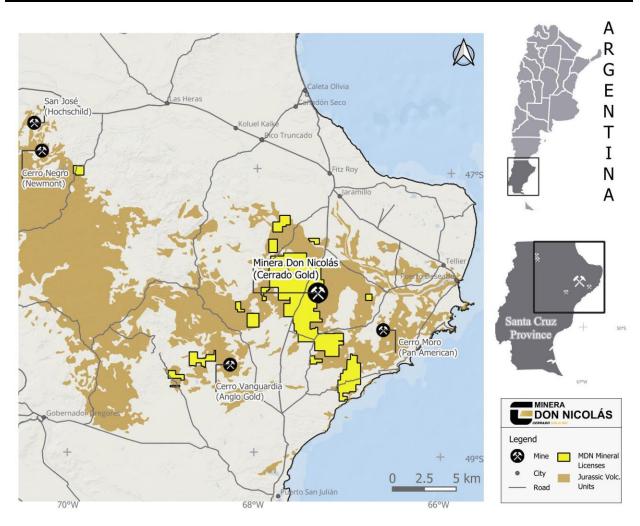

A 600 m drilling plan in Calandria North following the extension to the southwest of the main controlling plunge of the mineralization has been designed to test continuity of a potential UG resource beyond the extent of the current operational final pit.

The new resource update of the Paloma area was (see below) completed as part of the PEA jointly with a conceptual study of stope optimization and economic trade for future underground mining. Preliminary the studies show that the best potential lies in the South Sulfuro subvertical shoot and in a gentle plunging trend that goes through the pit bottom.

Additionally, the preliminary results in the new target named Sulfuro East has the potential of contributing additional underground mineable materials. Planning of further drilling in Sulfuro East and in step out targets to the south of Sulfuro have been outlined and will be executed once drilling resumes in early Q3 2024. These two target zones (East and South) are mainly driven by geophysical similarities to Sulfuro (Magnetic, Chargeability and Resistivity).

The move towards underground mining is in keeping with the transitions undertaken at both MDN's neighbouring mines including, Pan American Silver's Cerro Morro operation and Anglo American's Cerro Vanguardia mine. Based upon current resources in place, Cerrado's exploration team believes it can readily outline potential resources in excess of 100,000 ounces of gold in underground mineralized material to act as an additional source of feed to the mill. More definitive timelines for underground operations is subject to defining sufficient resources in upcoming exploration programs.

The Company recognizes revenue from provisional invoicing once all the performance obligations have been fulfilled and control is transferred to the customer. Final metal pricing occurs according to the quotational period stated in the offtake agreement and changes in metal prices during the quotational period may have a significant impact on the financial results of the Company.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

LIQUIDITY & CAPITAL RESOURCES

The Company's Consolidated Financial Statements have been prepared on the basis of accounting principles applicable to a going concern, which contemplates that the Company will be able to continue in operation for the foreseeable future and will be able to realize its assets and discharge its liabilities and commitments in the normal course of business.

As at June 30, 2024, the Company had a working capital deficit of \$59.1 million, a decrease of \$8.3 million from December 31, 2023. The Company's cash and cash equivalents balance at June 30, 2024 was \$3.4 million. This is an increase from cash and cash equivalents balance of \$0.4 million at December 31, 2023. The key contributor to the Company's working capital deficiency position at June 30, 2024 is a lower current debt payable of \$40.8 million offset by higher trade and other payables of \$46.2 million.

In March 2024, the Company announced that it has entered into an option agreement with Amarillo a wholly-owned subsidiary of Hochschild, whereby the Company has granted to Amarillo the option to purchase a 100% interest in the MDC Project for total consideration of \$60 million subject to the fulfilment of certain conditions.

In June 2024 the Company's shareholders approved the proposed arm's length sale by the Company to Amarillo of all the issued and outstanding shares of Serra Alta.

In accordance with the provisions of a Loan Agreement among the Company and Amarillo dated March 4, 2024 (the "Loan Agreement"), immediately following the shareholders' approval of the Transaction, all of the credit obligations owing by the Company and two of its subsidiaries, Serra Alta Mineração Ltda and Serra Alta Participações Imobiliárias S.A., to the Lender under the Loan Agreement were deemed to have been repaid in full and therefore the Loan Agreement terminated. In accordance with the Loan Agreement, the amount outstanding that has been deemed to have been repaid shall be applied as partial consideration payable by the Lender to complete the Transaction.

The purchase price will be payable in the following stages:

- 1. \$15.0 million, initially advanced by way of a 10% interest-bearing secured loan of which US\$7 million was advanced on March 4, 2024, \$1.0 was advanced on May 6, 2024, and the balance of \$7.0 million was advanced June 14, 2024.
- An aggregate of 45.0 million, payable in four installments over the next three yeara, approximately, as further described below.
- \$10.0 million (the "Second Payment") in cash, payable within 5 days of the date on which Amarillo gives written notice of its exercise of the Option to the Company, which option expires on March 19, 2025.
- \$20.0 million (the "Third Payment"), and, together with the Signing Loan and the Second Payment, the "Consideration") in cash payable upon either: (i) if necessary, the approval of the Proposed Transaction by Hochschild shareholders, which is to occur no later than June 30, 2025; or (ii) if Hochschild shareholder approval is not required, by no later than March 30, 2025.

In addition, Amarillo will make the following additional payments following the closing of the Proposed Transaction:

- \$10.0 million in cash payable within 14 days of the second anniversary of the date of the Company Shareholder Approval (the "Second Anniversary Payment"); and
- \$5.0 million in cash payable within 14 days of the earlier of: (i) the commencement of commercial production from the MDC Project; and (ii) March 31, 2027 (the "Production Payment").

During the Option Period Amarillo will take operational control of the MDC Project and has committed to spending a minimum of \$5 million in qualifying expenditures.

The Company expects that proceeds from the option agreement with Amarillo as well as the anticipated higher production from MDN will help reduce the Company's working capital deficit.

As at June 30, 2024 the Company had a cash balance of \$3.4 million and a working capital deficiency of \$62.1 million. In order to continue as a going concern, the Company must generate sufficient income and cash flows to repay its obligations as they become due, finance its operations and fund its capital investments. The future of the Company is

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

dependent on its ability to maintain profitable operations, generate sufficient funds from operations, and obtain new debt or equity financing or sale of assets. The Company's liquidity position is sensitive to a number of variables which cannot be predicted with certainty, including, but not limited to, meeting increased production targets, metal prices, foreign exchange rates, operational costs, and capital expenditures. If the Company's cash flow from operations is not sufficient to satisfy its requirements, there can be no assurance that additional debt or equity financing will be available to meet these requirements or available on terms acceptable to Cerrado.

Accordingly, these conditions represent a material uncertainty that casts significant doubt about the Company's ability to continue as a going concern. The consolidated financial statements do not include adjustments to the carrying values of recorded assets and liabilities that might be necessary should the Company be unable to continue as a going concern. These adjustments may be material.

Financings

In March 2024, the Company announced that it has entered into an option agreement with Amarillo, whereby the Company has granted to Amarillo the option to purchase a 100% interest in the Company's MDC Project for total consideration of \$60 million subject to the fulfilment of certain conditions.

On June 27, 2024 Cerrado shareholder approved the proposed arm's length sale by the Company to Amarillo of all the issued and outstanding shares of Serra Alta.

In accordance with the provisions of a Loan Agreement among the Company and Amarillo dated March 4, 2024 (the "Loan Agreement"), immediately following the shareholders' approval of the Transaction, all of the credit obligations owing by the Company and two of its subsidiaries, Serra Alta Mineração Ltda and Serra Alta Participações Imobiliárias S.A., to the Lender under the Loan Agreement were deemed to have been repaid in full and therefore the Loan Agreement terminated. In accordance with the Loan Agreement, the amount outstanding that has been deemed to have been repaid shall be applied as partial consideration payable by the Lender to complete the Transaction.

The purchase price will be payable in the following stages:

- 1. \$15.0 million, initially advanced by way of a 10% interest-bearing secured loan of which US\$7 million was advanced on March 4, 2024, \$1.0 was advanced on May 6, 2024, and the balance of \$7.0 million was advanced June 14, 2024.
- 2. An aggregate of 45.0 million, payable in four installments over the next three years, as described in the liquidity and capital resources section.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

Cash Flows

The Company's cash balance was \$3.4 million at June 30, 2024 as compared to \$0.4 million at December 31, 2023.

Operating activities

Cash provided by operating activities during the six months ended June 30, 2024, was \$7.9 million compared to cash provided by operating activities of \$17.3 million for the six months ended June 30, 2023. Cash provided by operating activities before working capital reflects the higher head grades achieved by the Company in 2024 and consisted of \$9.4 million as compared to \$7.0 million of cash provided by operating activities before working capital changes in 2023.

Cash provided by operating activities during the quarter ended June 30, 2024, was \$3.9 million compared to cash provided by operating activities of \$10.0 million for the quarter ended June 30 2024. Cash provided by operating activities before working capital reflects the higher head grades achieved by the Company in 2024 and consisted of \$8.4 million as compared to \$4.4 million of cash provided by operating activities before working capital changes in 2023.

Investing activities

Cash provided by investing activities during the six months ended June 30, 2024, was \$0.9 million and consisted primarily of exploration and evaluation assets of \$12.2 million, which includes the \$15.0 Amarillo option payment, offset by additions to property, plant and equipment of \$7.0 million and future consideration paid of \$11.3 million compared to \$30.2 million of cash used in investing activities for the prior year period which consisted primarily of additions to exploration and evaluation assets of \$7.3 million, additions to plant and equipment of \$18.9 million and future consideration paid of \$2.0 million.

Cash provided by investing activities during the second quarter ended June 30 2024, was \$7.9 million and consisted primarily of exploration and evaluation assets of \$14.1 million, which includes the \$15.0 Amarillo option payment, additions to property and plant and equipment of \$2.3 million and future consideration paid of \$3.9 million compared to \$18.0 million of cash used in investing activities for the prior year period which consisted primarily of additions to exploration and evaluation assets of \$4.4 million and additions to plant and equipment of \$12.0 million.

Financing activities

Cash used in financing activities during the six months ended June 30, 2024, was \$5.8 million which consisted primarily of the repayment of promissory note payable of \$12.0 million, offset by additional promissory notes of \$4.0 million and loan payable of \$4.8 million, compared to cash provided by financing activities of \$13.0 million in the prior year period which consisted primarily of \$10.0 million Gold stream advance payment and promissory notes payable of \$10.4 million.

Cash used in financing activities during the second quarter ended June 30, 2024, was \$15.6 million which consisted primarily of the MDC signing loan of \$7.0 million and payment on promissory note of \$10.5 million, compared to cash used in financing activities of \$4.6 million in the prior year period which consisted primarily of revolving facility repayments of \$2.3 million and loan paid of \$2.4 million offset by and increase in promissory notes of \$4.0 million.

The Company is dependent on external financing to fund its mineral exploration and evaluation activities. In order to carry out the planned exploration and pay for administrative costs, the Company will spend its existing working capital and raise additional amounts as needed. The Company raised \$10 million in March 2023 through an equalization payment with Sprott to fund the expansion of the mining operations at the MDN mine and for general and corporate purposes. The Company will continue to assess new properties and seek to acquire an interest in additional properties if it feels there is sufficient geologic or economic potential and if it has adequate financial resources to do so.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

Commitments

The Company has the following commitments as at June 30, 2024: lease obligation, land acquisition obligation, debentures, and secured note payable interest.

There are also three royalty agreements that apply to the Company's Don Nicolás Mine, described as follows:

(i) A royalty payable to the province of Santa Cruz in the amount up to 3% of the metal value extracted from the mine. The value of the royalty is calculated based on the market value of metals contained in the commercial production from the mine, less the direct and/or operating costs required to commercialize the metals, not including any financial costs, amortization expense or any profit distribution.

(ii) A 2% royalty on the refined product, payable to Royal Gold Inc. based on a royalty agreement enacted and updated on August 16, 2013. The royalty is only applicable to certain areas of the company. The royalty does not apply to any production in the Calandrias region, but it does apply to all other areas currently in production. The obligations under this royalty agreement are backed by a first mortgage granted to Royal Gold on a number of the Company's mineral properties owned in the province of Santa Cruz, named as follows: Syrah, La Paloma I, Micro I, Micro II, Mar III, Mar IV, Gol I, Gol II, Armadillo, Dorcón 3, Dorcón 4, Estrella I and Estrella II.

(iii) A royalty of \$3 per gold ounce, to a maximum of \$2 million payable to Sandstorm Gold Limited based on an agreement executed on February 28, 2006. This royalty is applicable to all areas of the Company and its properties which are currently under production.

As of June 30, 2024, the Company had the following undiscounted contractual commitments.

(Expressed in \$000's)

	Payments due by perio				
	<1 years	1-5 years	5> years	Tota

		2023	March 31, 2023	December 31, 2022	September 30, 2022	
Total assets	\$ 000's					
Total assets Total revenue	\$ 000's \$ 000's	2023	2023	2022	2022	
	• • • • •	2023 225,211	2023 193,595	2022 162,646	2022 140,711	
Total revenue	\$ 000's	2023 225,211 21,152	2023 193,595 27,499	2022 162,646 24,824	2022 140,711 17,819	

Metal sales are derived from the MDN mine in Argentina which have maintained consistent levels over the previous eight quarters. Total assets have consistently increased over the prior eight quarters. The increase is mainly attributed to continued exploration and evaluation expenditures in the Monte do Carmo gold project in Brazil, additions to property, plant and equipment in Argentina as well as the acquisition of Voyager in the second quarter of 2023.

CAPITAL STRUCTURE

The Company is authorized to issue an unlimited number of common and preferred shares, where each common share provides the holder with one vote.

As of August 28, 2024, the total number of common shares outstanding or issuable pursuant to other outstanding securities is as follows:

Common Shares	Number
Outstanding	103,214,463
Issuable upon exercise of Cerrado Warrants	78,518
Issuable upon exercise of Cerrado Options	8,712,492
Issuable upon redemption of Cerrado RSUs	3,527,497
Issuable upon redemption of Cerrado DSUs	1,425,000
Diluted common shares	116,957,970

Cerrado has not issued any preferred shares.

OFF-BALANCE SHEET ARRANGEMENTS

The Company does not have any off-balance sheet arrangements that have, or are reasonably likely to have, a current or future effect on the results of operations or financial condition of the Company including, without limitation, such considerations as liquidity and capital resources that have not previously been discussed.

RELATED PARTY TRANSACTIONS

In accordance with IAS 24 Related Party Disclosures, key management personnel are those persons having authority and responsibility for planning, directing and controlling the activities of the Company directly or indirectly, including any directors (executive and non-executive) of the Company.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

(a) Compensation of key management personnel

During the period ended June 30, 2024 and 2023 compensation of key management personnel is summarized as follows:

	June 30	June 2023
	2024	2023
Management and director compensation	\$ 1,705	\$ 3,100
Share-based payments	902	736
	\$ 2,607	\$ 3,836

(b) Due to and from related parties

In addition to the transactions detailed elsewhere in profit or loss, the Company shares administrative services and office space with Ascendant Resources Inc. ("Ascendant"), a company related by virtue of common directors and officers, and from time to time will incur third party costs on behalf of related parties. Related party transactions are recognized at the amounts agreed between the parties. Outstanding balances are due on demand, unsecured and settlement occurs in cash.

In 2024, the Directors of the Company, approved bonuses to certain senior management employees in the amount of \$1.0 million. These bonus amounts have not been accrued in these financial statements as they are contingent upon the Company obtaining the third advance pursuant to the transaction to sell MDC to Amarillo Mineração do Brasil Ltda. ("Amarillo") a wholly-owned subsidiary of Hochschild Mining PLC ("Hochschild") and therefore not guaranteed.

Ascendant

As at June 30, 2024, amounts owed from Ascendant in relation to shared services are \$3.3 million (December 31, 2023 - \$4.5 million).

On June 24, 2020, Ascendant was granted a total of 200,000 RSUs in the capital of Cerrado in exchange for administrative services provided. The Company recognized these RSUs as fully vested in 2021, and expensed any remaining unamortized amounts related to these RSUs in 2021, recognized under share-based payment expense accordingly.

On May 1, 2023, the Company entered into a US dollar unsecured promissory grid note (the "Related Party Grid Note") agreement with Ascendant in the principal amount of up to \$1.5 million. The Related Party Grid Note bears interest at a rate of 10.0% per annum, compounded monthly. The note will mature on demand on not less than 366 days' notice. As at June 30, 2024, the principal amount of the promissory note totaled \$0.8 million and the interest earned during the six months ended June 30, 2024 amounted to \$0.1 million recognized as finance income in the consolidated statement of loss.

The fair value of the Related Party Grid Note at June 30, 2024 was estimated at \$0.7 million using an effective rate of 35% corresponding to a rate that the Company would have obtained for a similar financing with a third party.

As at June 30, 2024 and December 31, 2023, the Company's balances related to the promissory notes are as follows:

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

Balance - June 30, 2024	\$ 714
Amortization of promissory note discount	62
Promissory note discounted at fair value	88
Interest accrued	45
Promissory note repayment	\$ (734)
Balance - December 31, 2023	\$ 1,253
Amortization of promissory note discount	129
Promissory note discounted at fair value	(477)
Interest accrued	101
Principal amount advanced	\$ 1,500

Voyager Metals Inc.

As at May 31, 2023, amounts advanced to Voyager Metals amounted to \$1.6 million including accrued interest (December 31, 2022 - \$1.4 million). Upon closing the acquisition transaction of Voyager, amounts advanced to Voyager were eliminated on the date of acquisition.

CRITICAL ACCOUNTING ESTIMATES

Refer to Note 5 of the Cerrado Financial Statements for the year ended December 31, 2023.

CHANGES IN ACCOUNTING POLICIES

Refer to Note 3 of the Cerrado Financial Statements for the year ended December 31, 2023.

FINANCIAL INSTRUMENTS HIERARCHY AND FAIR VALUES

Refer to Note 26 of the Cerrado Financial Statements for the year ended December 31, 2023.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

NON-IFRS PERFORMANCE MEASURES

The non-IFRS performance measures presented do not have any standardized meaning prescribed by IFRS and are therefore unlikely to be directly comparable to similar measures presented by other issuers.

Non-IFRS Measures

EBITDA

EBITDA is a non-IFRS measure that represents an indication of the Company's continuing capacity to generate earnings from operations before taking into account management's financing decisions, share based compensation, and costs of consuming capital assets, and management's estimate of their useful life. EBITDA comprises revenue less operating expenses before interest expense (income), property, plant and equipment amortization and depletion, and income taxes. Adjusted EBITDA has been included in this document. Under IFRS, entities must reflect in compensation expense the cost of share-based payments. In the Company's circumstances, share-based payments involve a significant accrual of amounts that will not be settled in cash but will settled by the issuance of shares in exchange for cash. EBITDA and Adjusted EBITDA do not have any standardized meaning prescribed by IFRS and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. EBITDA and Adjusted EBITDA exclude the impact of cash costs of financing activities and taxes, and the effects of changes in operating working capital balances, and therefore are not necessarily indicative of operating profit or cash flow from operations as determined under IFRS. Other companies may calculate EBITDA and adjusted EBITDA differently. As such, the Company has made an entity specific adjustment to EBITDA for these expenses. The Company has also made an entity-specific adjustment to the foreign currency exchange (gain)/loss.

The following table provides a reconciliation of net loss to Adjusted EBITDA:

		Three Months E	inded June 30	Six months ended June		
Adjusted EBITDA	Unit	2024	2023	2024	2023	
Net income (loss)	\$ 000's	1,030	(428)	(6,248)	(7,866)	
Adjusted for:						
Depreciation	\$ 000's	4,251	2,312	6,754	4,454	
Transaction costs	\$ 000's	54	99	105	714	
Finance items	\$ 000's	2,696	1,316	3,720	5,150	
Share-based payments	\$ 000's	631	611	1,285	1,027	
Foreign currency exchange gain/loss	\$ 000's	4,979	(2,272)	1,240	(1,337)	
Remeasurement of MDC secured note and stream obligation	\$ 000's	357	388	2,239	2,945	
Remeasurement of MDN stream obligation	\$ 000's	189	-	2,050	-	
Retroactive deferred revenue adjustment	\$ 000's	-	-	-	2,368	
Income taxes	\$ 000's	790	2,792	1,269	5,579	
Adjusted EBITDA	\$ 000's	14,977	4,818	12,414	13,034	

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

Average realized price and Average realized margin

Average realized price and average realized margin per ounce sold are used by management and investors to better understand the gold price and margin realized throughout a period.

Average realized price is calculated as metal sales per the statement of comprehensive earnings and includes realized gains and losses on gold sales less silver sales, per ounce sold. Average realized margin represents average realized price per gold ounce sold less total cash costs per ounce sold.

	Three Months E	inded June 30	Six months ended June		
Average realized price and Average realized margin		2024	2023	2024	2023
Metal sales	\$ 000's	34,741	21,152	55,117	48,651
Less: Silver sales	\$ 000's	(690)	(217)	(1,130)	(568)
Revenues from gold sales	\$ 000's	34,051	20,935	53,987	48,083
Gold ounces sold	oz	15,484	10,907	25,603	26,912
Average realized price per gold ounce sold	\$/oz	\$2,199	\$1,919	\$2,109	\$1,787
Less: Total cash costs per gold ounce sold	\$/oz	(\$1,178)	(1,306)	(\$1,520)	(1,206)
Average realized margin per gold ounce sold	\$/oz	\$1,021	\$613	\$589	\$580

Direct operating costs

The Company uses the non-IFRS measure of direct operating costs per gold ounce sold to manage and evaluate operating performance. The Company believes that, in addition to conventional measures in accordance with IFRS, certain investors use this information to evaluate the Company's performance and ability to generate cash flows. Accordingly, its is intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance in accordance with IFRS. The Company considers mine operating expenses per gold ounce sold to be the most comparable IFRS measure to direct operating cost per gold ounce sold and has included calculations of this metric in the reconciliations with the applicable tables to follow.

Direct operating costs per gold ounce sold includes mine direct operating production costs such as mining, processing and administration but does not include depreciation in production, and royalties and production taxes.

Total cash costs

Total cash costs is a common financial performance measure in the gold mining industry but with no standard meaning under IFRS. Cerrado Gold reports total cash costs on a sales basis. The Company believes that, in addition to conventional measures prepared in accordance with IFRS, such as sales, certain investors use this information to evaluate the Company's performance and ability to generate operating earnings and cash flow from its mining operations. Management uses this metric as an important tool to monitor operating cost performance.

Total cash costs include production costs such as mining, processing, refining and site administration, sales expenses and royalties, less share-based compensation and net of silver sales divided by gold ounces sold to arrive at total cash costs per gold ounce sold. The measure also includes other mine related costs incurred such as mine standby costs and current inventory write downs. Production costs are exclusive of depreciation. Production costs include the costs associated with providing the royalty in-kind ounces. Other companies may calculate this measure differently.

All-in Sustaining Costs

All-in Sustaining Costs per gold payable ounces includes mine direct operating costs (mining, administration and other mine related costs incurred) as well as refining and freight costs, royalties, corporate G&A and sustaining capital costs, less by-product credits, divided by gold payable ounces sold. The measure does not include depreciation, depletion, amortization and reclamation expenses.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

The following table provides a reconciliation of Direct operating costs, Cash costs and All-in Sustaining Costs to mine operating expenses, as reported in the Company's consolidated statement of income for three and six months ended June 30, 2024 and 2023:

		Three Months E	nded June 30	Six months ended June	
Direct operating costs		2024	2023	2024	2023
Mine operating expenses (from consolidated financial statements)	\$ 000's	23,148	16,745	46,715	37,442
Deduct: Depreciation in production	\$ 000's	(4,220)	(2,284)	(6,678)	(4,406)
Total cash costs (including royalties)	\$ 000's	18,928	14,461	40,037	33,036
Deduct: Royalties and production taxes	\$ 000's	129	(2,286)	(762)	(5,346)
Direct operating costs	\$ 000's	\$19,057	\$12,175	39,275	\$27,690

AISC per Au payable pound sold	Unit	Three Months Ended June 30		Six months ended June	
		2024	2023	2024	2023
Gold ounces sold	oz	15,484	10,907	25,603	26,912
Total Cash Cost Reconciliation					
Direct operating costs	\$ 000's	19,057	12,175	39,275	27,690
Deduct: Silver sales	\$ 000's	(690)	(217)	(1,130)	(568
Total Direct Operating Costs	\$ 000's	18,367	11,958	38,145	27,122
Royalties and production taxes	\$ 000's	(129)	2,286	762	5,346
Total Cash Costs	\$000's	18,238	14,244	38,907	32,468
Direct operating costs per gold ounce sold	\$/oz	\$1,186	\$1,096	\$1,490	\$1,008
Royalties and production taxes per gold ounce sold	\$/oz	(\$8)	\$210	\$30	\$199
Total cash costs per gold ounce sold	\$/oz	\$1,178	\$1,306	\$1,520	\$1,206
All-In Sustaining Costs (AISC) Reconciliation.					
Total Cash Costs	\$ 000's	18.238	14.244	38.907	32.468
Add: Sustaining Capital Expenditures	\$ 000's	856	128	877	233
Add: Corporate G&A, excluding depreciation and amortization	\$ 000's	2,477	2,293	4,858	5,700
Total All-in Sustaining Costs - Consolidated	\$ 000's	21,571	16,665	44,642	38,401
Deduct: Corporate G&A, excluding depreciation and amortization	\$ 000's	(2,477)	(2,293)	(4,858)	(5,700
Total All-in Sustaining Costs - Minera Don Nicolas	\$ 000's	19,094	14,372	39,784	32,701
All-In Sustaining Costs per Ounce Sold - Minera Don Nicolas	\$/oz	\$1,233	\$1,318	\$1,554	\$1,215

(1) If the Company were to include Corporate G&A expenses, AISC / Au oz would be \$1,393 and \$1,744 for the three and six three months ended June 30, 2024, compared to \$1,528 and \$1,427 for the three and six months ended June 30, 2023.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

RISKS & UNCERTAINTIES

The Company is subject to significant risks, challenges, and uncertainties, similar to other mineral exploration, development and productions, due to the nature of the mining industry. These risks and uncertainties include, but are not limited to the following:

Liquidity and Additional Financing

The Company's ability to continue its business operations is dependent on management's ability to secure additional financing. Liquidity requirements are managed based upon forecasted cash flows to ensure that there is sufficient working capital to meet the Company's activities and obligations.

The advancement, and exploration of the Company's properties, including continuing exploration projects, and, if warranted, construction of mining facilities and the commencement of mining operations, will require substantial additional financing. As a result, the Company may be required to seek additional sources of equity financing in the near future. While the Company has been successful in raising such financing in the past, its ability to raise additional equity financing may be affected by numerous factors beyond its control including, but not limited to, adverse market conditions, commodity price changes and economic downturns. There can be no assurance that the Company will be successful in obtaining any additional financing required to continue its business operations and/or to maintain its property interests, or that such financing will be sufficient to meet the Company's objectives or obtained on terms favourable to the Company. Failure to obtain sufficient financing as and when required may result in the delay or indefinite postponement of exploration and/or development on any or all of the Company's properties, or even a loss of property interest, which would have a material adverse effect on the Company's business, financial condition and results of operations.

Exploration, Development and Operating Risks

The exploration for and development of mineral deposits involves significant risks which even a combination of careful evaluation, experience and knowledge may not eliminate. While the discovery of an ore body may result in substantial rewards, few properties which are explored are ultimately developed into producing mines. Major expenses may be required to locate and establish Mineral Resources and Reserves, to develop metallurgical processes and to construct mining and processing facilities at a particular site. It is impossible to ensure that the exploration or development programs planned by Cerrado will result in a profitable commercial mining operation. Whether a mineral deposit will be commercially viable depends on a number of factors, some of which are: the particular attributes of the deposit, such as size, grade and proximity to infrastructure; metal prices which are highly cyclical; and government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use, importing and exporting of minerals and environmental protection. The exact effect of these factors cannot be accurately predicted, but the combination of these factors may result in the Company not receiving an adequate return on invested capital.

Mining operations generally involve a high degree of risk. Cerrado's operations are subject to all the hazards and risks normally encountered in the exploration, development and production of gold, including unusual and unexpected geologic formations, seismic activity, rock bursts, cave-ins, flooding and other conditions involved in the drilling and removal of material, any of which could result in damage to, or destruction of, mines and other producing facilities, damage to life or property, environmental damage and possible legal liability. Although adequate precautions to minimize risk will be taken, milling operations are subject to hazards such as equipment failure or failure of retaining dams around tailings disposal areas which may result in environmental pollution and consequent liability.

Limited Operating History

The Company has a limited history of operating and generating earnings from operations. The Company's continued operation will be dependent upon its ability to generate operating revenues and to procure additional financing.

Dependence on Minera Don Nicolas

While the Company holds and may invest in additional mining and exploration projects in the future, the Don Nicolas mine is currently the Company's only producing asset, providing all of the Company's operating revenue and cash flows. Consequently, a delay or any difficulty encountered in the operations at the Minera Don Nicolas would materially and adversely affect the financial condition and financial sustainability of the Company. Any adverse changes or developments, such as, but not limited to, the inability to successfully complete other work programs or expansions, obtain financing on commercially suitable terms, or hire suitable personnel and mining contractors, may have a material adverse effect on the Company's financial performance, results of operations and liquidity. In addition, the results of operations of the Company could be materially and adversely affected by any events which cause the mine to operate at less-than-optimal capacity, including, among other things, equipment failure or shortages of spares, consumables

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

and reagents, adverse weather, serious environmental and safety issues, any permitting or licensing issues and any failure to produce expected amounts of gold.

Uncertainty of Resource Estimates

The Company has engaged internal and expert independent technical consultants to advise it on, among other things, Mineral Resources, geotechnical, metallurgy and project engineering. The Company believes that these experts are competent and that they have carried out their work in accordance with all internationally recognized industry standards. If, however, the work conducted by, and the Mineral Resource estimates of these experts are ultimately found to be incorrect or inadequate in any material respect, such events could materially and adversely affect the Company's future operations, cash flows, earnings, results of operations, financial condition and the economic viability of its projects.

The Mineral Resource Estimate with respect to the Monte Do Carmo project in Brazil are based on limited information acquired through historical drilling conducted by outside third parties as well as from drilling completed by Cerrado. No assurance can be given that anticipated tonnages and grades will be achieved or that the indicated level of recovery or economic value will be realized.

No Defined Mineral Reserves

The Company has not defined any Mineral Reserves on its concessions at the Monte Do Carmo project in Brazil or at the Don Nicolas mine in Argentina and there can be no assurance that any of the concessions under exploration contain commercial quantities of any minerals. Even if commercial quantities of minerals are identified, there can be no assurance that the Company will be able to exploit the resources or, if the Company is able to exploit them, that it will do so on a profitable basis. Substantial expenditures may be required to locate and establish Mineral Reserves, to develop metallurgical processes and to construct mining and processing facilities at a particular site, and substantial additional financing may be required. It is impossible to ensure that the exploration or development programs planned by the Company will result in a profitable commercial mining operation. The decision as to whether a particular property contains a commercial mineral deposit and should be brought into production will depend on the results of exploration programs and/or feasibility studies, and the recommendations of duly qualified engineers and geologists. Several significant factors will be considered, including, but not limited to: the particular attributes of the deposit, such as size, grade and proximity to infrastructure; metal prices, which are highly cyclical; government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use, importing and exporting of minerals and environmental protection; ongoing costs of production; and availability and cost of additional funding.

Metal Price Risk

Even if commercial quantities of mineral deposits are discovered, there is no guarantee that a profitable market will exist for the sale of the metals produced. Factors beyond the control of the Company may affect the marketability of any substances discovered. The prices of various metals have experienced significant movement over short periods of time and are affected by numerous factors beyond the control of the Company, including international economic and political trends, expectations of inflation, currency exchange fluctuations, interest rates and global or regional consumption patterns, speculative activities and increased production due to improved mining and production methods.

The supply of and demand for metals are affected by various factors, including political events, economic conditions and production costs in major producing regions. There can be no assurance that the price of any minerals contained in a deposit will be such that the Company's properties can be mined at a profit. The Company is particularly exposed to the risk of movement in the price of gold. Declining market prices for gold could have a material effect on the Company's profitability.

Foreign Currency Risks

There continue to be risks relating to the uncertain and unpredictable political and economic environment in Argentina, especially at the provincial level in Santa Cruz where Don Nicolas mine is located. Inflation remains a challenge in Argentina and Argentina's central bank enacted a number of foreign currency controls in 2019 and 2020 in an effort to stabilize the local currency.

The MDN mine, which was acquired on March 16, 2020, is a U.S. dollar functional currency entity. Argentina has been considered a hyperinflationary environment with a cumulative inflation rate of over 100% for the last three years.

Effective December 23, 2019, changes to Argentina's tax laws proposed by the Argentine Government were implemented. The changes ratified and extended legislation which was to expire on December 31, 2019 and allow the Argentine Central Bank to regulate funds coming into and flowing out of Argentina in order to maintain stability and support the economic recovery of the country. The Argentine Government has not set an expiry date for these

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

restrictions, and they currently remain in place. These capital controls together with additional temporary controls enacted on May 29, 2020, have the effect of: requiring exporters to convert the equivalent value of foreign currency received from the export into Argentine Pesos; requiring the prior consent of the Argentine Central Bank to the payment of cash dividends and distributions of currency out of Argentina; requiring Argentine companies to convert foreign currency loans received from abroad into Argentine Pesos; and restricting the sale of Argentine Pesos for foreign currency. Accordingly, the Company is required to convert the equivalent value of proceeds received in foreign currency from the export of all gold doré from the Don Nicolas Mine, into Argentine Pesos. In addition, the Company would be required to obtain the prior consent of the Argentine Central Bank to the payment of cash dividends and distributions of profits out of Argentina.

Most recently, on September 16, 2020, Argentina's central bank enacted a new resolution requiring companies to refinance, with at least a two-year term, sixty percent of any debt maturing between October 15, 2020 and March 31, 2021. However, we do not hold any external debt at MDN. Therefore, this newly enacted resolution, is not expected to have a material impact on our financial statements.

Competition and Agreements with Other Parties

The mining industry is competitive in all its phases. The Company will compete with numerous other participants in the search for the acquisition of mineral properties, in the marketing of mineral resources, technical capacity and for financial resources. Their competitors include mining companies that have substantially greater financial resources, staff and facilities than those of the Company, as the case may be. The Company's ability to increase resources in the future will depend not only on its ability to explore and develop its present properties, but also on its ability to select and acquire suitable producing properties or prospects for exploratory drilling. Competitive factors in the distribution and marketing of mineral resources include price and methods and reliability of delivery.

The Company may, in the future, be unable to meet its share of costs incurred under such agreements to which it is a party and it may have its interest in the properties subject to such agreements reduced as a result. Also, if other parties to such agreements do not meet their share of such costs, the Company may not be able to finance the expenditures required to complete recommended programs.

Regulatory

Cerrado's current and future mining operations including but not limited to exploration, development, production, pricing, marketing and transportation are subject to extensive controls and regulations imposed by various levels of government that may be amended from time to time. Failure to comply with applicable laws, regulations and permit requirements may result in enforcement actions thereunder, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions.

The Company's operations may require licenses from various governmental authorities. There can be no assurance that the Company will be able to obtain all necessary approvals, licenses and permits that may be required to carry out exploration and development at its projects. A failure to obtain such approval on a timely basis or material conditions imposed by such authority in connection with the approval would materially affect the prospects of the Company.

Foreign Operations and Political Risk

The Company holds mining and exploration properties in Argentina and Brazil, exposing it to the socioeconomic conditions as well as the laws governing the mining industry in those countries. Inherent risks with conducting foreign operations include, but are not limited to: high rates of inflation; military repression; war or civil war; social and labour unrest; organized crime; hostage taking; terrorism; violent crime; extreme fluctuations in currency exchange rates; expropriation and nationalization; renegotiation or nullification of existing concessions, licenses, permits and contracts; illegal mining; changes in taxation policies including carbon taxes; restrictions on foreign exchange and repatriation; and changing political norms, currency controls and governmental regulations that favour or require the Company to award contracts in, employ citizens of, or purchase supplies from, a particular jurisdiction.

Changes, if any, in mining or investment policies or shifts in political attitude in any of the jurisdictions in which the Company operates may adversely affect the Company's operations or profitability. Operations may be affected in varying degrees by government regulations with respect to, but not limited to, restrictions on production, price controls, export controls, currency remittance, importation of parts and supplies, income, carbon and other taxes, expropriation of property, foreign investment, maintenance of claims, environmental legislation, land use, land claims of local people, water use and mine safety.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

Failure to comply strictly with applicable laws, regulations and local practices relating to mineral right applications and tenure could result in loss, reduction or expropriation of entitlements, or the imposition of additional local or foreign parties as joint venture partners with carried or other interests. In addition, changes in government laws and regulations, including taxation, royalties, the repatriation of profits, restrictions on production, export controls, changes in taxation policies, environmental and ecological compliance, expropriation of property and shifts in the political stability of the country, could adversely affect the Company's exploration, development and production initiatives in these countries.

In Argentina, a 12% export duty was imposed by the government in 2018, revised down to 8% thereafter, which affects the Company's Argentine operations. In the province of Santa Cruz, Argentina, where the Company's MDN mine is located, a new local procurement law was assessed requiring extractive industries to procure at least 50% of their goods and services from registered local providers, which could further impact our operational results.

The Company continues to monitor developments and policies in the jurisdictions in which it operates and the potential impact such developments and policies may have on its operations; however they cannot be accurately predicted and could have an adverse effect on the Company's operations or profitability.

Environmental

All phases of the mining business present environmental risks and hazards and are subject to environmental regulation pursuant to a variety of federal, provincial and local laws and regulations. Environmental legislation provides for, among other things, restrictions and prohibitions on spills, releases or emissions of various substances produced in association with mining operations. The legislation also requires that wells and facility sites be operated, maintained, abandoned and reclaimed to the satisfaction of applicable regulatory authorities. Compliance with such legislation can require significant expenditures and a breach may result in the imposition of fines and penalties, some of which may be material. Environmental legislation is evolving in a manner expected to result in stricter standards and enforcement, larger fines and liability and potentially increased capital expenditures and operating costs. The discharge of resources or other pollutants into the air, soil or water may give rise to liabilities to governments and third parties and may require the Company to incur costs to remedy such discharge. Although the Company believes that it will be in material compliance with current applicable environmental regulations no assurance can be given that environmental laws will not result in a curtailment of production or a material increase in the costs of production, development or exploration activities or otherwise adversely affect the Company's financial condition, results of operations or prospects.

Permits and Licenses

The Company is required to maintain approvals, licenses and permits from various governmental authorities in order to conduct its business. Such approvals, licenses and permits are complex and time consuming to obtain and, depending on the location of the project, may involve multiple governmental agencies.

In addition, the receipt, duration, amendment or renewal of such approvals, licenses and permits are subject to many variables outside the Company's control, including potential legal challenges from various stakeholders such as environmental groups, non-governmental organizations, community groups or other claimants. The requirements to obtain or maintain such licenses and permits are constantly subject to change. The costs and delays associated with obtaining the necessary permits, consents, authorizations and agreements required for the Company's operations may stop or materially delay or restrict it from proceeding with the development of an exploration project or the operation or further development of an existing mine, resulting in a material adverse impact on its business, financial condition and results of operations.

Substantial Capital Requirements & Liquidity

The Company will have to make substantial capital expenditures for the acquisition, exploration, development and production of mineral resources in the future. There can be no assurance that such capital will be available or, if available, will be on reasonable terms.

Issuance of Debt

From time to time, Cerrado may enter into transactions to acquire assets or the shares of other Companies. These transactions may be financed partially or wholly with debt, which may increase the Company's debt levels above industry standards. Depending on future exploration and development plans, the Company may require additional equity and/or debt financing that may not be available or, if available, may not be available on favorable terms. Neither the Company's articles nor its by-laws limit the amount of indebtedness that Cerrado may incur. The level of the Company's indebtedness from time to time could impair the Company's ability to obtain additional financing in the future on a timely basis to take advantage of business opportunities that may arise.

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

Insurance and Uninsured Risks

The Company's business is subject to a number of risks and hazards generally, including adverse environmental conditions, industrial accidents, labour disputes, civil unrest and political instability, unusual or unexpected geological conditions, ground or slope failures, cave-ins, changes in the regulatory environment and natural phenomena such as inclement weather conditions, floods and earthquakes. Such occurrences could result in damage to mineral properties or production facilities, personal injury or death, environmental damage to the Company's properties or the properties of others, delays in development or mining, monetary losses and possible legal liability. The Company will maintain insurance to protect against certain other risks in such amounts as it considers reasonable. However, its insurance will not cover all the potential risks associated with its operations. The Company may also be unable to maintain insurance to cover these risks at economically feasible premiums. Insurance coverage may not continue to be available or may not be adequate to cover any resulting liability. Moreover, insurance against risks such as environmental pollution or other hazards as a result of exploration and production is not generally available to the Company or to other companies in the mining industry on acceptable terms. The Company may elect not to insure against because of premium costs or other reasons. Losses from these events may cause the Company to incur significant costs that could have a material adverse effect upon its financial performance and results of operations.

Title Matters

The Company has taken steps to verify title to mining interests in which it has or is in the process of earning an interest in, including review of condition of title reports, vesting deeds, mining claim location notices and filings, and property tax and other public records and is not presently aware of any title defects. The procedures the Company has undertaken and may undertake in the future to verify title provide no assurance that the underlying properties are not subject to prior agreements or transfers of which the Company is unaware.

Future Financing Requirements

The development and exploration of Cerrados' properties may require substantial additional financing. Failure to obtain sufficient financing may result in delaying or indefinite postponement of exploration, development or production on any or all of the Company's properties or even a loss of property interest. There can be no assurance that additional capital or other types of financing will be available if needed or that, if available, the terms of such financing will be favourable to Cerrado.

With the acquisition of producing Minera Don Nicolas, the Company is reliant on the expected cash flows from operations of the mine to fund its current and future liabilities. There can be no assurance that operating cash flow or any additional financing will be sufficient for any unexpected development or other costs for the mine.

The amount and timing of raising additional capital, which may involve debt or equity, or a combination of both, may be materially impacted by the economic climate in the capital markets. As a result, the cost and availability of any debt and or equity financing may be restricted. Accordingly, there can be no assurance that the Company will be able to raise sufficient funds to satisfy its contractual obligations or to further explore and develop its projects, as applicable, upon terms acceptable to the Company, or at all.

Dilution

The Company grants stock options and registered share units under its share-based compensation plan. Holders are given an opportunity to profit from an increase in the market price of the Company's common shares with a resulting dilution in the interest of shareholders. The holders of stock options and registered share units may exercise such securities at a time when the Company may have been able to obtain any needed capital by a new offering of securities on terms more favourable than those provided by the outstanding rights. The increase in the number of common shares in the market, if all of part pf these outstanding rights were exercised, and the possibility of sales of these additional shares may have a negative effect on the price on the Company's common shares.

In addition, the Company may need to raise additional financing in the future through the issuance of additional equity securities. If the Company raises additional funding by issuing additional equity securities, such financings may substantially dilute the interests of shareholders of the Company and reduce the value of their investment in the Company's securities.

Reliance on Management

Shareholders of the Company will be dependent on the management of the Company in respect of the administration and management of all matters relating to the Company and its properties and operations. To the extent that

For the Second Quarter Ended June 30, 2024 and 2023 (Expressed in US dollars)

management's services would be unavailable for any reason, a disruption to the operations of the Company could result and other persons would be required to manage and operate the Company.

Conflicts of Interest

Certain directors and officers of the Company are also directors and officers of other reporting issuers involved in mineral exploration and development, and conflicts of interest may arise between their duties as officers and directors of the Company, as the case may be, and as officers and directors of such other companies.

Possible Failure to Realize Anticipated Benefits of Future Acquisitions

The Company may complete acquisitions to strengthen its position in the mineral exploration industry and to create the opportunity to realize certain benefits including, among other things, potential cost savings. Achieving the benefits of any future acquisitions depends, in part, on successfully consolidating functions and integrating operations, procedures and personnel in a timely and efficient manner, as well as the Company's ability to realize the anticipated growth opportunities and synergies from combining the acquired businesses and operations with its own.

Currency Risk

By virtue of the location of its operations and exploration activities, the Company incurs costs and expenses in a number of currencies other than the Canadian and U.S. dollar. The Company has historically raised and expects to continue to raise capital through equity financings principally in Canadian and U.S. dollars, while the majority of its operating and capital costs are incurred in Argentine Pesos and Brazilian Real, giving rise to potential significant foreign currency translation and transaction exposure which could have a material adverse impact upon the Company.

Unfavourable Economic Conditions

The Company's results of operations could be adversely affected by general conditions in the global economy and in the global financial markets. A severe or prolonged economic downturn could result in a variety of risks to our business, including our ability to raise additional capital when needed on acceptable terms, if at all. A weak or declining economy could strain our suppliers, possibly resulting in supply disruption, or cause delays in payments for our services by third-party payors. Any of the foregoing could harm our business and we cannot anticipate all of the ways in which the current our future economic climate and financial market conditions could adversely impact our business.

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL STATEMENTS

The information provided in this MD&A and the Consolidated Financial Statements is the responsibility of management. In the preparation of these statements, estimates are sometimes necessary to make a determination of future values for certain assets or liabilities. Management believes such estimates have been based on careful judgments and have been properly reflected in the consolidated financial statements.

Additional Information
